

Parking Revenue Systems

PARKLITE is the ideal solution for small parking area. The system ensures low running costs, based on simple but evolved mechanics. The design is straight forward, making the lane units (dispenser and reader) highly compact. Even non specialised operators can use it at optimum level.

The PARAGON system makes it possible to control a flat or multi-storey car park, enabling access, control of vehicle flows, automatic or manual collection of payment, supplying the necessary accounting and administrative reports.
